CGI Profio360

Ensuring successful project delivery for customers

Businesses within the manufacturing and construction industries that deliver their products through projects have unique enterprise resource planning (ERP) requirements. Effectively managing information and processes across the business to ensure successful project delivery for customers—each and every time—is critical and demands a comprehensive ERP solution that drives improvements across operations using the latest digital technology.

THE CHALLENGE

Real-time information is key to the success of project-based businesses. Manufacturers and construction companies need real-time and high-quality information not only for internal operations, but also in collaborating across their ecosystems. In addition, transparency is critical, especially in terms of reacting quickly to issues and managing complex partner networks—something that standard ERP solutions fall short in providing.
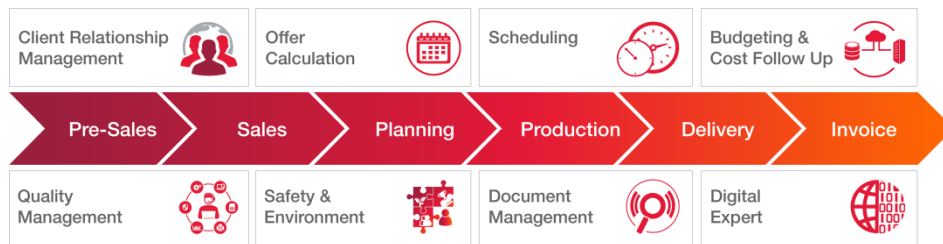

OUR SOLUTION

Based on industry best practices, CGI Profio360 revolutionizes how project-based businesses manage their information and processes, increasing knowledge, efficiencies and transparency across the enterprise.

CGI Profio360 offers innovative visual tools for defining company-specific business processes that transform operations and project delivery. It also enables companies to manage critical business information and reports based on individual task queues.

The functionality of CGI Profio360 links to any customer project—large or small. In addition, its artificial intelligence and automation capabilities, which reduce FTE hours, are scalable as projects increase and the business grows.

With CGI Profio360, companies can digitalize processes across the business, including in the following core areas:

BENEFITS

- All functionality linked to customer projects—large and small

- Support for both manufacturing and construction operations—all in one solution

- Visualization of connected business systems

- Proactive alerts (end users informed of all current project tasks and notified of upcoming tasks)

- Unique set of tools for managing project timetables (GANTT charts, location-based time charts, and task hierarchy)

- Simple order processes based on purchase and sales portals (effective way to manage your partner network)

- Intelligent production fine planning

.

An agile, browser-based system, CGI Profio360 offers interfaces that enable the easy exchange of data with other internal and third-party systems. The solution is accessible via all mobile devices, and the entire Profio platform can be hosted through CGI's cloud service. CGI also offers Profio as a Service, handling data management and system administration on behalf of clients.

WHY CGI?

CGI serves as an end-to-end digital transformation partner to manufacturing and construction companies across the globe. We deliver digital services and solutions that transform the entire enterprise, helping clients become more customer-centric and drive long-term growth.

With decades of experience, our expertise and support enable clients and their partners to deliver customer projects efficiently and cost-effectively while consistently meeting customer expectations and driving customer satisfaction.

ABOUT CGI

Founded in 1976, CGI is one of the largest IT and business process services providers in the world. Operating in hundreds of locations across the globe, CGI helps clients become customer-centric digital organizations.

We deliver high-quality business and IT consulting, systems integration and transformational outsourcing services, complemented by more than 150 IP-based solutions, to support clients in transforming into digital enterprises end to end.

CGI works with clients around the world through a unique client proximity and best-fit global delivery model to accelerate their digital transformation, ensure on-time, within budget delivery, and drive competitive advantage in today's increasingly digital world.
